GENERAL ASSEMBLY

ADVANCED CSS

Felix Cohen
felix@felixcohen.co.uk / @felix_cohen

TOPICS

- CSS & Text
- The border box model
- Classes & IDs
- Pseudo-selectors

- Brooklyn site code lab.
- Band site pairing.

CSS & TEXT

- Line-height
- Letter-spacing & kerning
- Aligning text
- Text-decoration:
 none, underline, overline, line-through
- Text-transform:
 capitalize, uppercase, lowercase
- Font variants

WEB INSPECTOR TIME

What is the link colour for article links on the Guardian?

What is the body font size on facebook?

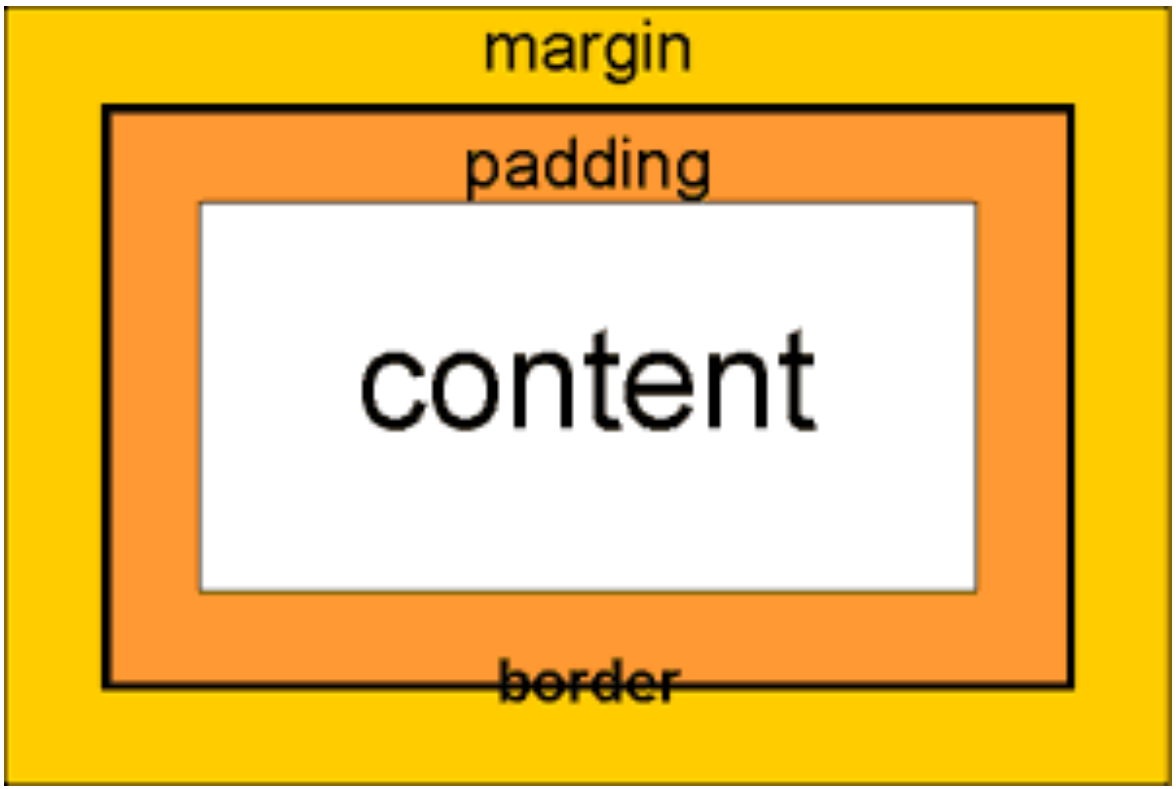
Where does The Awl use text-transform?

What is the main font on kottke.org?

BONUS!

Can anyone explain using CSS for SEO purposes?

BORDER BOX MODEL



SELECTORS

- Using elements for selection (we've done this!)

- Using IDs

```
<div id="first">hello world</div>
```

```
#first { color: #FF0000; }
```

- Using Classes

```
<li class="even">second thing</li>
```

```
.even { background: #DDD; }
```

NESTED SELECTORS

- Using elements, IDs and Classes for selection (we've done this!)

```
p { font-size: 12px/1.1 }
article p { font-size: 16px/1.1 }
article p.first { font-size: 120%; }
```

PSEUDO SELECTORS

- Some elements have ‘states’. The best example is links.

```
a:hover {
    text-decoration: none;
    color: red;
 }
a:visited { color: #555; }
```

links are `:link`, `:visited`, `:hover`, `:active`.

CODE LAB

Building a portfolio site for Brooklyn designers, Brook & Lyn

Get files from Schoology if you haven't already.

http://bit.ly/14H03Ex

BAND SITE

Work in pairs to improve your band sites; perhaps you could add:

- Typography flair
- Basic layout
- Google web fonts?!
- Link styles

There will be a quick show & tell...
